6"/160mm - NON RETURN VALVE

REF: BNRV160

The Buffalo NRV prevents foul and surface water flowing back into the property from a blocked sewerage system and flood conditions. This unique, patented valve is simply pushed into the inlet on the inside of a 160mm inspection chamber or manhole, whether plastic or clay. The valve can be simply retrofitted in seconds without the need for any expertise or specialist equipment. They are also extremely effective at preventing odours from returning via untrapped pipe systems to the property. It can also be used as a lockable flap valve for stormwater discharge.

- Stops back flow of effluent into properties, businesses and homes during flooding
- Prevents noxious odours from entering properties
- The flap is lockable, which allows you to close off the flow via the pipe to the inspection chamber, allowing maintenance to be carried out in the chamber
- Completely retrofittable and re-usable, if used for maintenance purposes. The valve can be inserted while work is carried out then removed and used again.
- Fits all 150mm Internal Diameter PVC and Clayware pipes
- Ideal for the Food and Catering sector
- WRc Tested and Certified
- 5 Year Guarantee
